Non-Surgical Treatment

Regenexx

Regenexx is available to members enrolled in a KTMC medical/prescription drug plan.

Regenexx provides patients with an alternative to orthopedic surgery by harnessing their body's own healing processes to treat orthopedic injuries including osteoarthritis, joint injuries, spine pain, overuse conditions, and common sports injuries.

Regenexx's proprietary, research-based methods and patented protocol allow its doctors to concentrate your cells and apply them precisely to the injured area. Regenerative medicine provides many advantages over traditional surgery—including faster recovery time, reduced risk, and lower cost.

Regenexx is covered as an in-network benefit within the KTMC medical/prescription drug plans. Non-Regenexx services may fall under a different benefit level, and may or may not be treated as in-network. Charges depend on your specific plan details, your deductible, and out-of-pocket maximum status at the time of services*.

Questions?

To learn more about Regenexx, contact the dedicated Regenexx Patient Liaison for KTMC at **866.312.7401** or visit **regenexxbenefits.com/ktmc/bc**.

Regenexx hosts weekly sessions where you can learn how its procedures may be able to help treat your orthopedic pain, and you can ask questions about your benefits. Visit **regenexxbenefits.com/webinar/?card** to register for a webinar. Scheduled dates and times are updated regularly.

* Please note, prior authorization is required for Regenexx services.
